FOR MANUFACTURING

Job Costing

To help ensure that business is profitable, you need accurate, current, and easy-to-access data about every costing detail relating to a job. Microsoft® Business Solutions—Great Plains® Job Costing delivers this functionality to manufacturers by capturing all costs when they occur, and consolidating them into one location that is easy to access and manage—delivering a comprehensive view of production profitability.

MONITOR OVERALL PROFITABILITY as well as detailed cost components for each job.

CONTROL VARIANCES and help improve performance by comparing actual costs to estimates.

Improved visibility—better profitability

Analyze information maintained for each job against estimated costs—such as labor, machine use, material, overhead, and shipping—and help reveal unacceptable trends that contribute to costs.

Gain a detailed understanding of costs

Define the types of transactions that are tracked per job, giving you deeper insight into the costs for jobs where additional scrutiny is required.

Identify job costs—right now

Help take any doubt out of what a job is really costing. Link transactions from anywhere in the system to a job to capture the true cost of the job.

Collect job costing data with greater flexibility, speed, and accuracy

Streamline data entry and make it easy for your employees to assign transactions to jobs when entry is required, eliminating redundant and error-prone duplicate entries.

FEATURES OVERVIEW

Job Link Maintenance	Aggregate all unlinked job cost data into a single job bucket using the graphical linking tool with drag-and-drop functionality.
Automatic Application of Costs	Link transactions from anywhere in the system to a job to capture the true cost of the job.
Variance Analysis	Automatically perform variance analysis per job with Job Costing.
Revenue and Expense Coding	Unlimited revenue and expense codes may be assigned to jobs within the system, allowing for more detailed financial analysis of each project.
Comprehensive Capture	This powerful management utility allows users to identify where and when to capture costs up front, avoiding the possibility of 'double booking' costs.
