

Microsoft® Business Solutions—Great Plains®

FOR FOUNDATION

Process Server

Maximize your business computing potential by moving processor-intensive tasks off the computers your employees use every day and onto dedicated process servers, avoiding costly slow-downs and vastly improving computer performance.

REDUCE SLOWDOWNS AND DELAYS by transferring business processes that require a large amount of processing power—such as posting or printing checks—to dedicated computers.

Maximize your network potential

Make the most out of your network resources and use each of your computers to its full potential through the power of distributed processing.

Improve computer performance

Reduce the burden on client computers by moving heavy background tasks to process servers and using your client computers for more immediate tasks.

Increase office productivity

Help eliminate slowdowns and delays by transferring tasks that take up large amounts of processing power to dedicated computers.

Expand as much as you need

Set up as many process servers as you need to accommodate your specific business needs, limited only by your own network.

Incorporate your entire system

Apply distributed processing across your entire system with seamless integration between Process Server and other Microsoft® Business Solutions—Great Plains® applications.

FEATURES OVERVIEW

Separate Heavy Processing Tasks	Take advantage of the faster processing capabilities of powerful computers on your network by distributing tasks that require a large amount of processing power—such as posting or printing checks—onto separate computers.
Process Tasks Remotely with Ease	Send tasks to distributed process servers on a case-by-case basis, or by specifically designating which tasks will be completed on the remote computers.
Utilize Both Dedicated and Non-Dedicated Machines	Designate remote computers as dedicated process servers for greater processing ability, or use them as client computers as well, depending on your specific business needs.
Expand as Needed	Set up as many process servers as necessary for your business needs, limited only by your internal network protocols.
Task-Orient Your Computers	Reduce the workload of client computers by moving heavy background tasks to process servers and using your client computers for more immediate tasks.
Install and Set-up with Ease	Install Process Server on your system in conjunction with other Great Plains applications, and easily specify the process servers and tasks to be completed remotely.
