

CASE STUDY: UPSTATE NY LEISURE AND ENTERTAINMENT COMPANY MANAGING MULTIPLE DEPARTMENTS AND EXPANSION

CHALLENGE:

This entertainment provider faces unique challenges managing various departments, and adhering to numerous regulations. Managing finances for more than 30 departments requires the flexibility to track a long list in the chart of accounts, and the ability to track non-financial data to better manage operations. Rapid growth through the years required a system that could keep up. Daily reporting was becoming cumbersome with a significant amount of time and manual labor required for data entry.

SOLUTION:

Two years ago, Rich Wheeler, President of RBS was hired to get more productivity out of the MS Dynamics GP system. Rich has spent time consulting with the accounting department to fine-tune processes, and to streamline reporting to handle growth with ease. Specifically, the system has improved daily reporting by producing a General Ledger Summary, can sort data in numerous ways such as by source code, or date, and the SmartList feature allows for easy exporting to Excel. Rich has also been instrumental in researching and integrating third party solutions to solve unique needs including ReQlogic™, and mobile applications. He continuously searches every avenue for whatever is needed to bridge the gap between accounting, and other operational functions

RESULTS:

With all pistons firing, MS Dynamics GP makes it easy to build and monitor budgets by department, and to pull specific data to better manage operations throughout the organization. With customized reporting, and carefully selected modules, there are a lot less headaches when it comes to reporting results, and facing audits. With a smooth running system, the accounting and auditing staff can spend more time on the issues at hand, rather than mundane tasks. The Microsoft SQL Server® based system makes integrating third party solutions easy, giving the client the flexibility to grow with the system, without fear of ever outgrowing it.

ABOUT RBS:

Located in New York's Capital District, Revered Business Solutions, Inc.'s experience, professionalism and strong customer support have created a winning combination with Microsoft Dynamics GP, Project Accounting from Marcil Technologies and a host of other third party developers.
